

Python Lab Assignments

S.No	Problem Statement	Submission Date
1	Write a Python program to read two integers using <code>input()</code> and <code>int()</code> , and display the results of all arithmetic operations between them (+, -, *, /, //, %, **). Display an error message if division by zero is attempted.	05/10/2026
2	Write a Python program to read a student's marks in three subjects (out of 100 each) and calculate the total, average, and percentage. Assign the grade as follows: • 70% and above – DISTINCTION • 60% to below 70% – FIRST CLASS • 40% to below 60% – SECOND CLASS • Below 40% – FAIL Reject marks outside the range 0–100.	05/10/2026
3	Develop a menu-driven Python application for a single bank account with the options Deposit, Withdraw, Display Account Details, and Exit. The menu should repeat until the user exits. Display confirmation messages for successful transactions and error messages for invalid choices, negative amounts, and insufficient balance.	05/10/2026
4	Write a Python program to process the given Python string below to clean and transform the data into a valid format. <pre>raw_data = """ naveen KUMAR naveen.kumar@COMPANY.com +91-98765-43210 """</pre> Output format: Name : Naveen Kumar Initials : NK Email : naveen.kumar@company.com Domain : company.com Phone : *****3210 Valid : True	05/10/2026
5	Write a Python program for a restaurant bill using the following functions: • <code>get_price(item)</code> returns the item's price, or 0 if it is not on the menu • <code>item_cost(item, qty)</code> returns the cost and must use <code>get_price()</code> • <code>calculate_gst(amount, rate=0.05)</code> returns the GST • <code>generate_bill(subtotal, discount_percent=0)</code> returns the discount, GST (on the discounted amount), and final total • <code>split_bill(total, people)</code> returns the whole rupees each person pays and the rupees left over Write a main program that calls these functions and prints the bill.	05/10/2026
